Abstract (en)

The method involves positioning workpieces (2) in a cleaning chamber (1). The workpieces are subjected with a cleaning medium in the form of gas e.g. compressed air, to blow-off adhesive work media and work residues. The blow-off of the media and residues takes place by a number of individual blasts of the medium on the workpieces. The blasts are directed in three groups on the workpieces with different impinging angles. An independent claim is also included for an apparatus for cleaning adhesive work media and work residues of workpieces.
