Abstract (en)

The device has a transporting device for faster transporting of bar or rod shaped material e.g. copper pipe (3), to be separated. Another transporting device is provided for decelerating the material to be separated. One of the transporting devices has induction coils for contact less acceleration of the material. The transport devices accelerate the material parallel to a longitudinal direction. Independent claims are also included for the following: (A) a device for processing of bar or tubular material (B) a method for separation of bar or rod shaped material (C) a method for processing of bar or tubular material.
