Abstract (en)

The method involves opening a sheet of a main printed product e.g. brochures, where the product is able to be opened from vertical direction. Drive inserts (3a) are fed to the printed product in a conveying channel in a conveying direction, and the product is transported continuously in the conveying channel. The product with the fed drive inserts is then closed, where the inserts are fixed inside the product in a specific position. An independent claim is also included for a device for inserting drive inserts in main printed products.
