Abstract (en)

[origin: EP1655435A2] The arrangement has a stationary side plate (2) and a movable leaf (3) respectively including adjacent closing edges (7, 8) on its front side within an overlapping area. Turning ledges (11, 12) are arranged in the adjacent closing edges and turned from two sides. The movable leaf is held up by controlling the turning ledges. The turning ledges and a controller of a door assembly wirelessly transmit a signal.
