Abstract (en)

The method involves system (1) in which communication network with lateral network component (101), user especially motor vehicle driver (20), mobile terminal (30) and central computer unit (11). The method has two ways for fixing signal element of longitudinal route. In first regulation process data concerning relative position of mobile terminal is manipulated through lateral network component. Further regulation process involves manipulation of internal information status of motor vehicle which are communicated across mobile terminal to central processing unit. The result of two regulation processes is compared with one another. An independent claim is also included for a system for fixation of usage fee.
