Abstract (en)
The frame has front and rear parts with a set of borings (5A`, 5C`, 5D`, 2`, 4`, 6A`, 6C`, 6D`), where each boring of the front part is associated to corresponding boring of the rear part. The borings are aligned when the parts and a spacer (3) are superimposed. Multiple fixing units penetrate into the borings to integrate the parts and spacer. The parts have front and rear facades (5, 6) with edges (5A-5D, 6A-6D) respectively. An independent claim is also included for a display frame support.
