Abstract (en)

The device for the displaying of advertisements or information on lawn surfaces with grass blades slightly inclined in one direction includes at least one weight (3) with a base surface (7) which temporarily loads the grass blades so that they are kept at least approximately parallel to the ground. The base surface of the weight corresponds to the design of the advertisement of information. Several weights, preferably interconnected, can be used to achieve the desired effect. An independent claim is included for a method for the producing of a display on a grass surface entailing the use of one or more weights with a base surface designed to produce the desired effect.
