Abstract (en)  
[origin: EP1655809A1] A cable clamp comprises at least two flanging or clamping elements (21, 22) suitable for being pivotally assembled for flanging at least one cable wire (50), each of said flanging elements (21, 22) having at least one notch (23) intended for cooperating with a notch (24) in another of the flanging elements (21, 22), the relative rotation of the two flanging elements (21, 22) allowing said notches (23, 24) to be brought closer together for forming at least one flange by means of which the cable wire (50) is flanged by the cable clamp, and a locking key (30) intended for being driven in translation and comprising at least one projection (31) that is suitable for cooperating by means of a cam effect with at least one of the flanging elements (21, 22) so as to make it rotate, by means of translation of the locking key (30), for bringing the notches (23, 24) closer together as far as a position corresponding to the formation of the flange or flanges, then lock it in this position in which the cable wire or wires (50) are flanged or clamped.
