Abstract (en)

[origin: WO2004060751A2] The invention relates to a general-purpose support for feeding bowls of different shapes and sizes. The inventive support secures any feeding bowl in a circular shoulder of the inventive device by means of a dynamic self-arresting multipoint fixation, thereby protecting the floor and the walls around the feeding place from being soiled. The device may be produced from any material, especially however from rubber, and in this compact embodiment can be taken along in the car and when travelling.
