Abstract (en)
[origin: WO2005020753A1] A system for detachable suspension of shelves (4) from essentially vertically positioned carrier elements (1, 26) provided with slots or grooves (2). Elongate, U-shaped supporting elements (3, 25) are adapted to support said shelves (4) and are fixed in a protruding manner to the carrier elements (1). The system further comprises fasteners (7), which are adapted to be arranged on the underside (8) of the shelf (4), adjacent two opposite side edges (9) of the shelf (4). The fastener (7) is adapted to be arranged in two opposite positions on the underside (8) of the shelf (4), i.e. a first position in which it is allowing two shelves (4) to be arranged with their side edges (9) next to one another and to be supported by the same supporting element (3, 25), and a second position in which the second portion (4) of the fastener (7) is oriented away from the side edge (9) of the shelf, the side edge (9) of the shelf (4) protruding from the supporting element (3, 25).
