Abstract (en)

[origin: WO2005019050A1] Disclosed is a device for accommodating and dispensing a flowable product, particularly a liquid detergent or conditioning agent. Said device comprises a container for the flowable product, which is provided with at least one closable discharge port. The aim of the invention is to create a device that can be used directly without adding other elements and can be stored near the object that is to be treated. Said aim is achieved by removably connecting the product container (2) to a trough-shaped receptacle (8) within which a plurality of plate-shaped or cloth-shaped absorbent elements are accommodated on top of each other while the exterior face of the product container (2), which faces the receptacle (8), is provided with a fastening means (7) for removably fixing an absorbent element (9).
