Abstract (en)
[origin: FR2857653A1] The dispensing head connected to a fluid product reservoir (1) comprises a fixed base (2) mounted on the reservoir. An activating element (3) mounted on the base rotates between two end stop positions (2213,2214). A dispensing orifice (30) can be selectively sealed by rotating the activating element on the base. Axial displacement of the activating element during its rotation comprise a guide track (221) having two sections (2211), connected together at a bottom point (2210), each defining an end stop.
