Abstract (en)

[origin: WO2005022021A1] The invention relates to a modular valve and distribution system comprising at least two components that can be interconnected. According to the invention, the components have a parallelepipedal housing, provided at least with connection openings (4a, 4b, 4c, 4d, 4e) for supply and drainage. The system is also equipped with a connection module (1) for connection to a cold and hot water supply line network, in addition to at least one module (2a, 2b, 2c) comprising a water delivery valve.
