Abstract (en)
[origin: WO2005017437A1] The invention relates to a heat exchanging device, especially for a motor vehicle, comprising at least one flow device (8) and at least one collection and/or distribution device. Said collection and/or distribution device comprises at least two moulded parts (2, 3) and at least two bordering elements, and the moulded parts (2, 3) form at least two flow paths (5, 6) for a fluid. Said collection and/or distribution device has a transition region (11) in at least one section, which at least partially interconnects the flow paths (5, 6) of the collection and/or distribution device. The moulded parts (2, 3) come into contact in at least three sections with the flat surfaces thereof.
