Abstract (en)  
[origin: WO2005020195A2] The adhesive leaflet-label blank comprises a printable sheet (21) which is sized to suit conventional desktop printers and which has a layer of adhesive provided between a release sheet (22) and a region of the rear surface of the printable sheet (21). The printable sheet (21) is printable on both front and back surfaces with only that portion of the rear surface covered by the release sheet (22) unavailable for printing. The printable sheet (21) includes longitudinal and transverse fold lines (23, 26) indicating where the sheet may be folded after printing to form a folded leaflet-label. The printable sheet (21) also has lines of perforation (40, 43) provided along each of the longitudinal edges of the sheet for removing edge strips (43, 45) from the sheet after printing. Removal of the edge strips (43, 45) produces a tab (28) at one edge of the printable sheet which is used to hold the leaflet-label closed when folded. The leaflet-label blank is particularly suited for use where only small numbers of leaflet-labels are required such as for home use and prescription labels etc.
