Abstract (en)

[origin: EP1509018A1] The session initiation protocol or SIP protocol has at least one protocol element for indicating the origin of a bearer modification. . The protocol element can be embedded in a content-disposition header field according to the RFC2183 standard or can be embedded in an SDP protocol according to the RFC2327 standard. Independent claims are also included for the following: (a) a method of modifying a bearer in a communications network (b) a computer program product, especially SIP client software (c) a device with an arrangement for implementing the inventive method; and (d) an arrangement with a computer program product and/or devices for implementing the inventive method.
