Abstract (en)

[origin: FR2876892A1] The stopper (2) has two orifices that are remote from each other along a longitudinal direction of the stopper. The longitudinal direction coincides with a longitudinal axis of a separator (1) when the stopper is mounted on the separator in a blocked position of the stopper. The orifices have sufficient dimension so that the separator is simultaneously inserted into them. An insert (17) is integrated to the stopper by fixing units.
