Abstract (en)

[origin: EP1656974A1] The device has two units, each receiving a safety binding unit and each mounted on a longitudinal strip (2) to adjust its longitudinal position by sliding in guides (10). Several mounting points (20-23) for mounting the strip on an upper surface of a ski allow a longitudinal displacement of a zone of the strip related to the surface. Bases (4, 7) contacting the surface extends over a width greater than the width of the strip.
