Abstract (en)

The apparatus has a control unit for performing a band thickness adjustment by bringing a feed component that is coupled with a high-lifting unit (7) by resetting forces from a high-lifted position into a band thickness position. A positioning component (9) takes a position that corresponds to the band thickness position. The positioning component is locked with a locking unit in the band thickness position. An independent claim is also included for a method for adjusting band thickness of a feed apparatus for advancing a band-type material.
