Abstract (en)  
A package-forming device comprises a box-forming component (110) having a top opening for insertion of article(s) to be packaged, and a lid-forming component having longitudinal and transverse side portions, a peripheral rib, and a side skirt that is positioned outside the box-forming component in the closed position, where lid-forming component is hollow, and includes a portion forming a packaging component. A package-forming device comprises a box-forming component having a top opening for insertion of article(s) to be packaged, and a lid-forming component having longitudinal and transverse side portions, a peripheral rib, and a side skirt that is positioned outside the box-forming component in the closed position, where lid-forming component is hollow, and includes a portion forming a packaging component provided with housing(s) into which the articles for packaging are inserted.
