Abstract (en)

[origin: EP1657199A1] The device has a conveying organ (F1) with which flat products are conveyed in a product stream. A separating unit (T) is provided for dividing the stream into two partial streams. The unit has receptacles (4), which are arranged one behind the other for the reception of the flat product, where the receptacles are moved transverse to conveying directions for the formation of the partial streams and in the conveying directions.
