Abstract (en)
Aqueous preparation (I) comprises surface-active substances (a) and micro capsules (b) consisting of a covering (obtained by reaction of a protein with an anionic polymer), an oil phase and/or an active agent. An independent claim is also included for a preparation of micro capsules with an average diameter of 0.1-500 micros, comprising pH-induced coacervation of oil phases and/or active substances into a covering (made of proteins and anionic polymers), cross linking the resulting covering by contacting with an aldehyde component; and treating the reaction products (with a large extent of anionic charge in the covering order) with cationic surfactants and/or polymers with neutral or cationic character.
