Abstract (en)

[origin: EP1657384A1] The closure has a handle (24) engaging at an axle (14) of an engine (15) or at a link of a gear (30). The engine is fitted in a housing (10), and a gear is attached at the axle of the engine. A rotatable latch (20) is transferred between different situations by manual rotation (28, 29) of the handle. The latch is swiveled in the housing, in which a closure part (25) held in a body engages during manual closing of a door or a tailgate.
