Abstract (en)

The device has an enclosure (1) to receive negotiable instruments (2) and associated to a reservoir (3) with a gaseous destruction product (4) comprising hydrogen chloride gas. The reservoir releases the gaseous destruction product under a control of control units (5) via a pyrotechnic actuator (8), in case of an event such as an attempt of break-in, to disperse the gaseous destruction product on the negotiable instruments. The enclosure is disposed in a vehicle or a building. An independent claim is also included for a utilization of hydrogen chloride in a safety device for transporting and storing printed negotiable instrument to destroy the negotiable instrument in case of an attempt of break-in.
