Abstract (en)

[origin: US2007056079A1] The invention relates to a long cap ( 1 ) which is designed to protect the hair. The inventive cap comprises two essentially-parallelepiped side walls which are fixed to one another along one of the long sides ( 2 ) and short sides ( 3 ) thereof, such as to define: a first pouch ( 4 ) which is disposed at the proximal end of the cap, said first pouch forming a cap; and a second pouch ( 5 ) which is disposed at the distal end of the cap, said second pouch forming a receptacle for the floating mass of hair ( 6 ). The invention is characterised in that the two ends thereof are provided with complementary fixing means ( 9 ) which can be brought into contact with one another in order to close the cap around the head after the hair has been placed therein. For said purpose, the distal end is rotated by 180° around the longitudinal axis of the cap and subsequently folded back over the proximal end such as to cover same.
