Abstract (en)

[origin: DE10327022B3] Blister package comprises a pressing device (40) having a contact element (24) on the head part (25) and a further contact element (30) on the pin part (27). The contact elements are electrically connected to each other. The individual contact surfaces and the assigned individual conductor strips in insulated surface of an upper part (4). Preferred Features: At least one of the individual strip conductors and a common strip conductor are partially covered by an electrically insulating layer. The package has a receiving region for a housing of a control and computation unit and an interface to the contact points.
