Abstract (en)
[origin: WO2004106641A1] The invention relates to an insulating shuttering element (1, 11, 21, 41), in particular for producing a building floor plate shuttering and to a method for producing said shuttering. In order to avoid the necessity to maintain the shuttering during the production of the building floor plate, the inventive shuttering elements (1, 11, 21, 41) are provided with connection elements (3, 13, 23) on the top side (2, 22) and/or lower side (15) thereof. Said connection elements (3, 13, 23) are embodied in the form of projections and disposed in such a way that the adjacent connection elements (3, 13, 23) form cavities (4, 14, 24) in which the projected connection elements (13) corresponding to at least one shuttering element (11) embodied in the form of a connection plate are inserted in the case of the correct use of the shuttering element (1, 11, 21, 41). In addition, the shuttering elements (21, 41) embodied in the form of boundary elements are also provided with said projected connection elements (23) on the top side (22) and/or lower side (25) of a horizontal extension (27).
