Abstract (en)
[origin: EP1498788A1] The device has a display gear train (42), whose moving part (62) carries a display disc. An energy source e.g. drum (43), is kinetically connected to the gear train. A regulation system (40) regulates the movement of rotation of the gear train. A control mechanism (38) controls the driving of the gear train by the energy source when the information to be displayed should be modified.
