Abstract (en)
[origin: WO2005029520A1] The invention relates to a switchgear with a conductor connection created by means of a ring cable lug, said switchgear comprising a pre-mounted structural component provided with a holder and a screw with a washer assembly which is held by the holder and forms, together with a connection part, a clamping point for a conductor connection created by means of a ring shoe lug. The holder (1) can be displaced between an open position and a closed position of the clamping point, and is subjected to the action of a spring element (3) that holds it in the open position when the clamping point is released.
