Abstract (en)

[origin: WO2005024887A2] A cathode ray tube comprising an internal magnetic screen (60) and a frame (40) supporting a shadow mask (3). The screen is attached to the frame by means of cut-out tabs (63) on the peripheral lip (61) of the screen. The tabs are inserted into openings (62) on the surface of the flange (41) of the frame entering into contact with the screen. Said type of attachment makes it possible to eliminate additional parts and to automatize the attachment of the screen to the frame.
