Abstract (en)

[origin: DE10338654A1] Device has an arrangement for carrying away heat from several battery cells arranged in a housing. The wall of the housing (1) enclosing the battery cells (2) is shaped so that it forms at least one passage (3,4) for a heat conducting medium that is closed relative to the interior of the housing. The passage is shaped so that its wall (5,6) is in shape-locking contact with the adjacent battery cells.
