Abstract (en)  
The dryer has a device for supervising the level in a condensation collector using a switched circuit having two electrodes arranged in different locations and two resistance levels. The electrodes are bridges by resistors, and switched in series. The switched circuit supervises the level (12) of a component of the condensation collector (4). The condensation collector (4) is a plastic part, and manufactured as a one part with the circuit. The electrodes (6) are integrated in the condensate collector (4). The electrodes (6) and the resistance network (15) are integrated in the condensation collector. An independent claim is included for a method.
