Abstract (en)
A tissue paper comprising cellulosic and silk fibers is described. The tissue paper can be used in toilet paper, paper handkerchiefs and wet wipes. Additionally the tissue paper can comprise synthetic fibers. The silk fibers are of a color different from the color of the cellulosic fibers as assessed by the human naked eye. The amount of silk fibers can account for between a positive amount and 5% of the total weight of the fibers. The length of the silk fibers can be equal or less than 8mm. A process for making such a tissue paper is described. A kit comprising such a tissue paper, a packaging structure and graphical indicia is described, wherein the indicia further enhances the perception of softness, bulkiness and/or kindness to skin for the user of the tissue paper.
