Abstract (en)

[origin: EP1659250A1] Door or window comprises a mounting with coupling elements (7, 8) which sit in use on connecting pieces (2, 3) and a rotating element (13) to form a fixed coupling between the connecting pieces and the rotating element. An independent claim is also included for a corner deviating unit. Preferred Features: The coupling elements are formed as sleeves with an inner contour corresponding to the outer contour of the connecting pieces and the rotating element. The coupling elements slid on the connecting pieces against the restoring force. A housing (6) for a corner deviating unit is also provided.
