Abstract (en)

[origin: EP1659252A1] The method involves transmitting acknowledgement signals, after modification of adjustment of a parameter value. The acknowledgement signals are different according to whether the value is an end value or not. The parameter takes a finite number of intermediate values between two end values. The acknowledgement signals transform a given adjustment level or given adjustment variation. An independent claim is also included for a motorized closing/occluding/sun protecting/shield device.
