Abstract (en)  
[origin: EP1659826A2] Hearing aid has a section (HdO) which fits behind the ear and an earpiece (IdO). These are linked by a connector (V) which is made from a shape memory material so that it reassumes the desired shape if it is bent. Independent claims are included for: (A) a hearing aid as described in which the connector contains a spring component which presses the earpiece against the ear; and (B) a method for inserting the hearing aid.
