Abstract (en)
[origin: WO2005023039A1] The invention relates to a key carrier comprising a base body (1) and a window, wherein one respective end of the base body (1) and window (6) is provided with a fork-shaped termination. A key ring (21) can be introduced into a gap (18) defined by the prongs (10,11) of the fork-shaped end of the window (6). When inserted, said key ring is secured by means of a retaining bolt (14). The prongs (10,11) of the window can be clipped in between the prongs (2,3) of the base body. When clipped in, the window is retained by pivoting journals (16,17) which engage with the opposite ends of the window bores (12,13) receiving the retaining bolts (14).
