Abstract (en)  
[origin: WO2005023040A1] The invention relates to an adhesive closing part comprising a support band (10) that is provided with hooking elements (12) which are disposed thereupon, and a cover band (18) that covers the support band (10) on the side facing away from the hooking elements (12) and is wider than the support band (10) such that lateral edge zones (20) of the cover band (18) extend beyond the associated longitudinal edges of the support band (10) on both sides. At least one additional cover band is provided whose free lateral edge zones also extend beyond the associated longitudinal edges of the support band (10) such that another sealing system is created in addition to the first sealing system, resulting in an overall improvement of the sealing effect.
