Abstract (en)

[origin: WO2005021166A1] Disclosed is an apparatus for filling dispensing devices comprising a pump unit that is provided with a metering cylinder and a storage container for each component. A coupling mechanism (5) is disposed between each storage container (2, 3) and an associated connection of a filling station. In a preferred embodiment, the device-coupling part (28) is located in an inlet nozzle (17) of the dispensing device (1) while the station-coupling part (29) is positioned in a guiding element (31) within the housing (33) of the filling station (30). The inventive apparatus makes it possible to fill storage containers in a fast and simple manner without adding impurities and air.
