Abstract (en)

[origin: WO2005021394A2] The invention relates to a dispensing device, for example, a double cartridge (1), comprising a sealing plug and a locking ring with bayonet connecting means. The sealing plug (7), the outer surfaces of the cartridge outlets (4, 5) and the wall interior of the locking ring (6) comprise means (17, 26; 18, 27), which cooperate with one another, in order to, when turning the locking ring, press the sealing plug into the outlets or pull it out therefrom. This makes it possible to realize a tight closure on the one hand, and on the other, it is very easy to pull the tight-fitting sealing plug out again.
