Abstract (en)  
[origin: WO2005033299A1] A method of repairing primate mammalian tissue is disclosed, with the method comprising removing blood cells from the primate mammal, controllably expanding the blood cells by a factor of at least seven times preferably in less than seven days while maintaining their three-dimensional geometry and their cell-to-cell support and cell-to-cell geometry, and reintroducing the expanded blood cells into the primate mammal within a time period sufficient to allow the primate mammal body system to utilize the blood cells to effectively repair damaged tissue.
