Abstract (en)

[origin: EP1662071A2] Method for laying pipes through a ceiling of a building comprises forming a shell for the ceiling, applying an auxiliary element on the shell, applying a supporting covering element so that the pipe region remains free from building material and applying further covering parts, laying the pipes so that they are guided through the pipe region from a ceiling upper side to a ceiling lower side and finishing the ceiling. An independent claim is also included for a box used as auxiliary element used in the above method. Preferred Features: The pipe region is foamed or filled with filler after laying the pipe.
