Abstract (en)

The coupling device for coupling accessories to a post (100) having a coupling profile (101) with a plurality of attachment configurations (103, 103A), comprises a first part (1) and a second part (2) that can be coupled to each other, and configured to define when coupled a channel (12) that can house a wider part (101A) of the coupling profile and having an area (13) open towards the outside that allows the narrower part (101 B) of the coupling profile to pass. The first part (1) and/or the second part (2) have an attachment configuration (14, 14A) configured in order to cooperate with the attachment configuration (103, 103A) of the coupling profile (101). The invention also relates to a mounting assembly and a fence.
