Abstract (en)

The present invention relates to a device for locking a side panel or door of a vehicle. The device comprises a first element (2) for engaging the side panel or door (P) with a vehicle portion, the first element (2) being movable between a locking position, at which opening of the side panel or door is not allowed, and an unlocking position, at which opening of the side panel or door (P) is allowed, and a second element (3), being fastened to the first element (2), which can be manually operated by a user to shift the first element (2) between the locking and unlocking positions. The first element (2) is provided with at least one guide (5,6) and the second element (3) is provided with means (9) suitable to slidingly engage this guide (5,6), the movement of the first element (2) between the locking and unlocking positions depending on the position of the engaging means (9) with respect to the relative guide (5,6).
