Abstract (en)  
The variable valve drive (1) operates a valve (3) moved by a cam (5) and a tappet (13). The volume change of the working cavity (18) of a hydraulic lifting device (19) acts on the tap it. The hydraulic pump (25) has a pressure cavity (22) with the volume (36) that can be reduced by a displaceable wall (27) in the pressure cavity, with expulsion of hydraulic fluid from the pressure cavity into the working cavity.
