Abstract (en)

The method involves changing electronics associated to a normal mode to a programming mode by specific activation of a time switch activating button (104). The recording of time delay duration is started and terminated by specific activation of a start/stop button (102). The electronics associated to the programming mode is changed to the normal mode during which the time delay duration is recorded in the electronics. An independent claim is also included for a time switch.

Abstract (fr)

L'invention concerne un procédé de programmation de la durée de temporisation d'une minuterie d'un interrupteur comprenant un premier bouton marche/arrêt (102), un deuxième bouton de déclenchement de la minuterie (104) pendant ladite durée de temporisation et une électronique associée.
