Abstract (en)

[origin: WO2005120306A1] A glass for consuming and tasting drinks, such as beer, has a plurality of raised ribs (14) inside it, extending from the bottom (15) to the opening (6) of the glass (1) and evenly distributed radially or with a helical or spiral path; a glass (1) having such ribs (14), if held at an angle of substantially 45<0> during filling and rotated during and after filling, allows the drink to be subjected to a whirling movement, resulting in the partial elimination of carbon dioxide and enhancement of the organoleptic attributes of the beer.
