Abstract (en)

[origin: WO2005021017A1] The invention relates to a method for producing a plant extract from Kava (*Piper methysticum*), comprising the following steps: extracting plant parts by using organic extractants such as water-containing or water-free alcohols, ketones, carboxylic acids, alkanes, chlorohydrocarbons and supercritical gases or mixtures thereof, and treating the residue which is at least partially liberated from the organic extractant under acidic (pH = 3) or basic (pH = 9) conditions, and/or subjecting the residue to adsorption processes on cation exchangers or uncharged adsorbents based on organic polymer resins.
