Abstract (en)

[origin: WO2005028017A1] The invention relates to the application of active substances to the surface of a wound. An insert made of porous material is applied to the surface of the wound, said porous material having a sealing surface which is used to cover the surface of the wound and the layer. The liquid active substance is fed in a temporally controlled manner into the insert and is suctioned. The liquid active substance contains bacteriophages in order to improve healing of the wound.
