Abstract (en)  
[origin: WO2005023362A1] The electrostimulation device (1) comprises acquisition means (2) for data (A, B, C) relative to a subject to be treated, connected to data (A, B, C) processing means (3) arranged to generate signals (4, 5) for controlling means for stimulating the subject to be treated. The processing means (3) are arranged to process the data (A, B, C) on the basis of several auricular charts (M) indicative of those points of the body on which to act to treat a given disturbance, in such a manner as to treat simultaneously and synergically several disturbances of a subject. The electrostimulation method consists of acquiring data relative to the subject to be treated and processing the data to generate control signals indicative of a stimulus to be applied to the subject to be treated.
